## FREQUENTLY ASKED QUESTIONS

**Q: Can I walk on the metal roof after it is installed?**

**A:** Yes, but like with any roof, care should always be taken.

**Q: Is a metal roof noisy when it rains?**

**A:** A study conducted by the Acoustic Group found that the sound from a metal roof was only six decibels greater than that of a conventional asphalt roof. With ArrowLine's four way locking and fastening system and the proper underlayment your ArrowLine roof will not contribute to additional noise.

**Q: How does the cost of an ArrowLine metal roof compare to other roofs?**

**A:** Although the ArrowLine roofing system may cost more initially the ArrowLine metal roof should never need to be replaced and therefore should be less expensive over the life of your home. Common asphalt shingles have a shorter life span and will need to be replaced periodically and can be more expensive over the life of your roof.

**Q: Can a metal roof be damaged by hail?**

**A:** ArrowLine roofing is designed to withstand the impact of most hailstorms. ArrowLine's double embossed panels will help minimize damage that might be caused by hail. ArrowLine roofing is covered by a hail protection warranty and approved by many insurance companies for reduced homeowners' insurance rates.

**Q: Can ArrowLine roofing reduce my energy bills?**

**A:** The TRINAR® finish used in the manufacturing of ArrowLine roofing, reflects the majority of the sun's rays and therefore minimizes any heat build-up in your attic. The solid colors are ENERGY STAR® approved which means that you could actually have a cooler attic when combined with proper ventilation.

**Q: How long should I expect my ArrowLine roof to last?**

**A:** ArrowLine roofing should be the last roof system that you ever buy. ArrowLine roofing was designed to withstand the extreme cold of the northern regions and the blistering heat of the southern states. ArrowLine roofing carries a **Lifetime Non-Prorated Limited Warranty**.

**Q: Can I install ArrowLine roofing over my existing roof?**

**A:** Yes, in most cases. Check with your local building inspectors to see if there are any restrictions in your area.

**Q: Do I need to run a ground wire to the shingles?**

**A:** Grounding of metal roofing and siding is not required by most major building code organizations. Some local building codes might require it, so check with the local inspectors before starting the job.
