

## WALKING on Your Metro Roof

### Post Install Instructions

### General Information

Thank you for choosing a Metro roof to protect your home, the following information will be useful to enhance the life of your roof. For safety reasons we do not recommend walking on your roof. Call your professional roofing contractor instead. Periodically sub-trades may need to get up on your roof, and the following will help them do so in a safe manner.

### General Care & Maintenance of Your Metro Roof

In areas of low annual rainfall and to maintain that new fresh look you may want to periodically rinse the roof surface with a garden hose. This will help maintain the appearance of your roof and keep it clean and debris free. Failure to wash the roof surface in this manner WILL NOT affect your panel warranty.

### Metro Panels

Most of the Metro panel profiles provide their strength at the nose (front down-turned edge) and you should focus your weight over the balls of your feet in this area as shown. Lightweight, soft-soled shoes are recommended for good grip and feel. Avoid walking on or near the panel side-laps.
